1. Applicants' election of species of July 23, 2009 is acknowledged. Claims 2-4 and 6 have been withdrawn from further consideration as being drawn to nonelected species.
2. Claims 1 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1, it is unclear what is meant by "2.2 to 10", because nothing has been associated with the values.

Furthermore, with respect to component (III), it is unclear what is meant by the language, "which modify the properties of the stabilizer"; it would seem that any auxiliary component would accomplish this task.

Also, it is unclear how component (III) is distinguished from component (II). They do not appear to be mutually exclusive.

Lastly, it is unclear what is meant by the language, "in essence". It cannot be determined what quantity of free NCO groups is permitted by the language.

3. Claims 1 and 5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants have failed to adequately define the language, "in essence".
4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lau et al. (Photostabilizing effectiveness of new HALS produced by isocyanation of hindered piperidine derivatives).

Lau et al. disclose the production of new HALS stabilizers by reacting 1,2,2,6,6-pentamethyl-4-piperidinol with isocyanates, including polyisocyanates. See entire document. Though Lau et al. fail to disclose the use of polyisocyanates having 2.2 to 10 isocyanates groups, the position is taken that the use of such polyisocyanates would have been prima facie obvious in view of the teachings of the reference and further in view of the fact that such polyisocyanates as p-mdi, having the claimed functionality, were conventional and well-known isocyanates at the time of invention. This position is taken under the provisions of MPEP 2144.03. Furthermore, one seeking to increase the stabilizing effect or functionality of the modified HALS compound of LAU et al. would have been motivated to use a polyisocyanate having increased isocyanate functionality.
